BIOMEDICAL ENTREPRENEURSHIP IN UPSTATE SOUTH CAROLINA

Friday November 4, 2005

The historic Westin Poinsett Hotel
Greenville, South Carolina

As one of the world's pioneering biomedical programs, Clemson University's Department of Bioengineering is internationally recognized for significant contributions in the field of biomaterials engineering. Each year, the Bioengineering Department welcomes its alumni back to the area for a one day program on topics pertinent to the biomedical industry.

This year for the first time, the event will be open to Upstate businesses and financial communities and to local entrepreneurs.

The Clemson University Research Foundation (CURF), in conjunction with Clemson's Department of Bioengineering, invites you to this day long event focused on biomedical entrepreneurship in the Upstate. The program will offer an overview of:

- The best of Clemson's recent biomedical discoveries upon which small companies have been or will be spun off
- Initiatives and collaborations at the University, state and federal levels that support the formation and growth of start-up technology companies
- The Upstate incubators and their capability to meet needs specific to biomedical ventures
- The enabling business climate which has resulted in explosive growth of existing local biomedical companies
- Existing and future opportunities for technology-centered collaboration

For more information:

A detailed agenda and information on registration will be posted as available on the internet at www.ces.clemson.edu/bio.
